

## Is a cloud platform that integrates Operational Safety Management, Quality Assurance, and Biosafety.

### ABOUT THE PLATFORM

It's a system that integrates modules specialized in operational safety management (SMS), biosafety, documentation control and continuous improvement (audit management) in the aeronautical industry, with the aim of efficiently managing operational safety and assurance of quality in a single platform.

Qualyflight facilitates the collection of data and the correct management of processes involved in an aeronautical organization.

### BENEFITS

- Collection of operational safety data.
- Proper workflow management.
- Generates reports.
- It complies with the guidelines of ICAO document 9859..
- Compliance with Biosafety protocols.
- Management of internal, external and remote audits.
- Creation of personalized checklists.
- Classification of documents by categories.
- It facilitates the work of teams remotely.
- Affordable for all types of aeronautical organization.

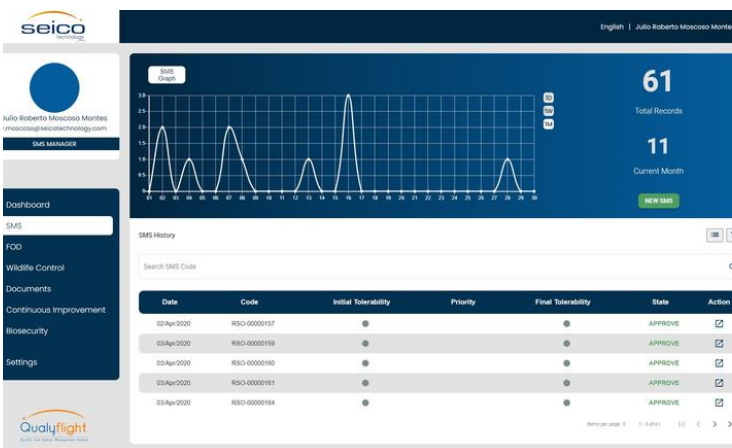

### MODULES

- **SMS:** allows to prevent, mitigate and control the occurrence of incidents and accidents in aeronautical operations.
- **Biosafety:** personnel identification, temperature measurement, access control, alarm generation and analysis of historical records.
- **Continuous Improvement:** offers monitoring and improvement of company activities through a complete management of both internal and external audits, facilitating remote audits.
- **Documents:** the system facilitates the classification of documents by organizing them by categories, as well as their management through a production flow from the initial request to their final publication and subsequent updates.
- **FOD:** allows the collection of information on foreign substances or objects that could potentially cause damage to aircraft, as well as the corresponding analyzes to prevent them.
- **Wildlife Control:** identification of fauna attracting factors, allowing the monitoring of events and quantities, which after the respective analysis can be converted into an operational safety report.

### TECHNOLOGICAL FEATURES

- Technological platform offered under the modality SaaS (Software as a service).
- Payment according to requirements
- Cloud hosting on AWS (Amazon Web Services).
- 24 x 7 Technical support.
